

M3W2D3 Ironlauncher

miguel.garrido@ironhack.com

Ironlauncher

Ironlauncher dynamically **generates** a project structure based on different choices:

1. View
2. JSON
3. Fullstack

Ironlauncher

Has a preferred directory structure:

- `public`: Public Assets folder (css, js scripts, images)
- `models`: Mongoose Schemas and models
- `routes`: Project routes

Ironlauncher

Uses:

- nodemon, mongoose, morgan, cookie-parser and other useful packages are pre-installed.
- Error handling support included
- .env file added

Ironlauncher

Installation

```
npm install -g ironlauncher
```

Ironlauncher

Usage

```
npx ironlauncher@latest name-of-project
```
